VIRTUAL PIPE ORGAN

Content Cambiare Series

With a Content Cambiare organ, you are just a few clicks away from the sounds of the famous Müller organ in the St. Bavo Church in Haarlem or the renowned Marcussen organ in the Laurenskerk in Rotterdam. Or perhaps you prefer the magnificent Silbermann organ in the Petrikirche in Freiberg, Germany? With hundreds of available sample sets, the possibilities with Hauptwerk™ and Sweelinq are truly endless!

Our Cambiare models are available in various versions. These models are divided into organs with internal speakers or external speakers. They come in a low cabinet design or a tall cabinet: the so-called console version.

To experience the sound quality of our different models, you are warmly invited to visit one of our dealers near you or attend one of the events or concerts held at our organ workshop in Ermelo. Through our website and social media channels, you can listen to a variety of recordings to hear the amazing sound of the Cambiare series Virtual Pipe Organs.

What is Hauptwerk™?

Hauptwerk™ is essentially a software program developed to bring the authentic sound of pipe organs into your living room with stunning realism. In Hauptwerk™, so-called sample sets can be loaded. A sample set contains a complete library of organ sounds, recorded pipe by pipe in their original space, often including the acoustics of that specific location.

What is Sweelinq?

Sweelinq, like Hauptwerk, is a virtual organ sampler that enables you to play beautiful pipe organs from the comfort of your home. Unlike Hauptwerk, you don't pay per sample set but instead a fixed monthly subscription. This gives you unlimited access to all available Sweelinq sample sets.

Via MIDI connections, Hauptwerk™ and Sweelinq can communicate with an organ console. A high-quality and finely tuned audio system by Content receives these signals and reproduces them with lifelike accuracy in your church, living room, or music studio.

Using a touchscreen or traditional (drawknob) stops, you can activate the organ's ranks. It's possible to load multiple sample sets into a Content Cambiare organ or add new sample sets at a later time.

With the Content Cambiare series, you bring the very best of the virtual organ world into your home!

VIRTUAL PIPE ORGAN

Digital organ or VPO?

At Content, you can find both types of organs! Thanks to our years of experience, we have in-depth knowledge of church organs, audio speaker systems, amplification, and the optimal reproduction of sounds. Both organ options are of a very high quality.

A significant difference between digital or VPO is how the sound is generated. With a virtual pipe organ, you play samples of the pipe organ being recorded in the respective church. These recordings are made from various locations within the church. In more-recent sample sets, it allows you to select the playback position yourself. This recording technique allows you to hear the organ exactly as it should be heard in the chosen church space. You can bring a famous church organ to life in the comfort of your living room. Listen to our samples for an impression!

With a digital organ, pre-recorded samples from various churches are combined into four different organ styles (North German Baroque, Dutch Romantic, French Romantic, and English Symphonic). Each organ style has its own sample library generated from “clean source samples,” which are carefully selected to create the stoplist for a digital organ. These “clean samples” are recordings that reproduce the pipe organ sound as purely as possible (without the spatial effects of the environment in which they were recorded).

Together, the ensemble of samples sounds is representative of the respective organ style. As an organist, you have control over how these samples sound in the space in which the organ will be heard. For example, you can determine the position in the space, add or omit reverberation, apply tunings, modulations, and many other options digitally to the existing source sample. With this flexibility, you play a completely customized and tuned organ in your living room!

It goes without saying that personal preference and taste play a strong role in the choice between a VPO or digital organ. For both solutions, you are always in the right place at Content Orgels. We are happy to advise you!
